Canberra	60.0%	45	20	12	8
Weighted Average	66.3%	2,033	1,442	964	478

The above results are preliminary, with 'final' auction clearance rates published each Thursday. RP Data, on average, collects between 85% and 90% of auction results each week. Clearance rates are calculated across properties that have been taken to auction over the past week.

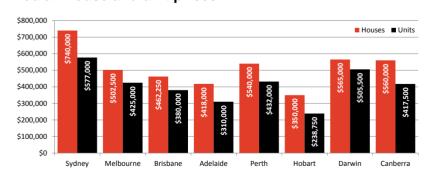

Auction volumes increase and clearance rates strengthen slightly

Across the combined capital cities, the preliminary auction clearance rate was recorded at 66.3 per cent this week, having increased from the 64.6 per cent over the previous week. It is no surprise that after the two long weekends, auction volumes increased by a significant amount over the week, up from 881 the previous week to 2,033 this week. At the same time last year, 1,749 capital city properties were taken to auction and the auction clearance rate was recorded at 67.7 per cent. This week, Melbourne's preliminary auction clearance rate was recorded at 63.7 per cent, having strengthened slightly from 63.0 per cent over the previous week and volumes increased from 373 last week to 878 this week. One year ago, the Melbourne auction market had strengthened with a clearance rate of 70.4 per cent across 822 auctions. Meanwhile, in Sydney, auction volumes also increased over the week, from 361 to 817. The preliminary auction clearance rate was recorded at 75.7 per cent, up from 71.3 per cent over the previous week and higher than the 72.7 per cent recorded at the same time last year when there were less auctions held across the city (585).

'Time on market' (TOM) is simply the average number of days between when a property is first listed for sale and the contract date. The rate of vendor discounting is the average percentage difference between the original listing price and the final selling price. The statistics are calculated across results received by RP Data over the past week and include properties transacted over the past four weeks. The data is based on private treaty sales only and records without a valid sale price have been excluded from the vendor discount analysis. The analysis also excludes results where there are less than 10 observations.
